Summary

Application developer and ISC2 CC-certified professional with a foundation in full-stack development, backend engineering, and information security. Experienced building enterprise-grade applications with JavaScript/TypeScript, Python, React, Node.js, and MongoDB. Skilled in designing RESTful and GraphQL APIs, implementing authentication and RBAC, containerized deployments, and CI/CD pipelines with GitHub Actions. Proficient in Linux administration. Background in production systems support and military information assurance brings a reliability-first, security-conscious engineering mindset. Currently pursuing a second BS in Software Engineering and a second MS in Software Engineering with a DevOps focus.

Technical Skills

- **Languages** - JavaScript, TypeScript, Python, Java, SQL, C#
- **Frontend** - React, HTML5, CSS3, Responsive Design
- **Backend** - Node.js, Express, Spring Boot, REST APIs, GraphQL, microservices
- **Databases** - MongoDB, Mongoose, PostgreSQL, Redis
- **DevOps & Cloud** - GitLab, GitHub Actions, CI/CD, Docker, Nginx, Linux
- **Security** - JWT/RBAC, container security, CI/CD pipeline security, Active Directory, Nmap, Wireshark
- **Tools** - Git, Vim, IntelliJ IDEA, VS Code, GitKraken, Postman, Agile/Scrum

Projects

Nine Tigers Online Platform - Full-stack member portal for a Kung Fu school

- Designed and implemented a Node.js/Express backend with Mongoose data models and MongoDB persistence
- Built REST and GraphQL API layers with input validation, error handling, and structured logging
- Implemented JWT-based authentication and RBAC for multi-tier user permissions
- Containerized the application with Docker for consistent development and deployment
- Managed source control with Git, GitHub, and GitKraken; followed branch-based workflows
- Followed Agile methodology with iterative sprints, user stories, and continuous integration

Unity-Tools - Python CLI tool for student enrollment reporting at Unity Environmental University

- Built a Python/pandas data pipeline that merges DoD Report and Enrollment Registration CSVs on SIS ID, normalizing data types for reliable joins
- Implemented advisor-assignment logic with edge-case handling for unassigned students, ally mismatches, and multi-ally scenarios
- Generated filtered reports flagging students with 5+ days of inactivity, missing assignments, zero-score courses, blank activity fields, and course/section mismatches
- Designed an interactive menu-driven CLI with per-advisor drill-downs and CSV export to a local reports directory

Trudvang Character Creator - Multi-step form wizard and backend service for a tabletop RPG system

- Architected backend data models and API routes to support a multi-step character creation workflow
- Built a responsive React frontend with clean UX, state management, and form validation
- Integrated authentication and role-based access with clean separation of concerns

DARKFORGE - Java domain application for tabletop RPG character, crew, and equipment management

- Designed a polymorphic domain model built on a layered class hierarchy, with an abstract Item base extended by CharacterItem (and its Weapon and Armor subtypes), VehicleModule, and CargoItem, plus generic interfaces (InventoryHolder<T>, Equippable<T>)
- Built a stream-based equipment catalog with search, filtering, and analytics over data loaded from JSON resource files
- Implemented and benchmarked three persistence strategies (Java binary serialization, hand-rolled JSON, and Gson) to evaluate trade-offs
- Developed a Swing GUI (catalog browser, inventory, and vehicle-upgrade panels) alongside a menu-driven CLI, unified behind a Facade pattern
- Wrote a JUnit 5 test suite covering the model, collection, persistence, and analytics layers
- Managed development in Git with feature branches, structured commits, and pull requests

Experience

Application Support Specialist - City of South Portland

April 2025 - Present

- Administer Active Directory and enterprise application services across city departments
- Develop and implement application solutions, integrating functionality citywide
- Serve as advanced escalation point, troubleshooting complex production and system issues
- Perform daily system monitoring; maintain backup/recovery systems and technical documentation
- Collaborate cross-functionally with IT, public safety, and administrative teams to deliver technology solutions

Baccalaureate Advisor for Distance Education - Unity Environmental University

February 2024 - April 2025

- Managed 300+ students using Salesforce CRM; developed automation scripts to improve workflows
- Implemented data security measures and utilized ticket tracking for issue resolution
- Coordinated across departments to streamline student support processes

Section Leader / Information Assurance Officer - U.S. Marine Corps

July 2010 - July 2016

- Managed military network security as Information Assurance Officer; maintained protocols for classified systems
- Led and trained a squad in cybersecurity best practices and operational readiness
- Enforced compliance with DoD security policies across communications and information systems

Certifications

- ISC2 Certified in Cybersecurity (CC)

Education

Boston University - MS in Computer Information Systems, Web Application Development

Graduated August 2026

University of Maine Farmington - BS in Secondary Education

Graduated December 2023
